Pre-final year Computer Science Engineering student with hands-on experience building responsive, user-friendly web applications using React, JavaScript, and CSS. Demonstrated ability to deliver production-ready features with zero critical bugs and excel in collaborative hackathon environments solving real-world challenges.

ACADEMIC QUALIFICATIONS

Education/Course	Year	School/College	CGPA
B.E. CSE	2023 - 2027	Sri Krishna College of Technology	7.5 (up to 6th Sem)
Class 12th	2022-2023	Rosemary Matric Higher Secondary School	93%

TECHNICAL SKILLS

Programming Languages: Java (Strong), C++ (Intermediate), JavaScript
Frontend: React, CSS, HTML
Backend: Spring Boot, Java
Database: MySQL, SQL
Tools & Technologies: Git, RESTful APIs
Core Competencies: Responsive Web Design, UI/UX Optimization, Full-Stack Development, Problem-Solving

INTERNSHIP EXPERIENCE

Nitro ware Technologies, Coimbatore - Web Development Intern

- Assisted in building responsive web pages and front-end features using HTML, CSS, JavaScript, and React.
- Collaborated with the development team to fix bugs, improve UI performance, and enhance user experience.

CodSoft- App Development Intern

- Worked on developing **mobile applications** with a focus on user-friendly interface and performance.
- Implemented **core app functionalities**, including UI components, navigation, and data handling.
- Gained hands-on experience in **app development lifecycle**, from design to deployment.
- Improved skills in **problem-solving, debugging, and optimizing application performance**.
- Collaborated on assigned tasks and successfully completed project modules within deadlines.

KEY ACHIEVEMENTS

- Participated in a national-level hackathon focused on building **AI-powered web agents**.
- Designed and developed an intelligent system capable of **automating web-based tasks using AI**, Successfully **qualified for Round 2**, competing among top teams.
- Collaborated in a team to implement **real-time problem-solving and innovative AI solutions**.
- Developed responsive, mobile-friendly web interfaces for a personal project using modern frontend practices (React, JavaScript, CSS), ensuring consistent cross-device user experience and optimal performance
- Enhanced UI/UX through strategic optimization of page layouts and visual components, delivering smoother user interactions and measurably improved usability
- Competed in EY Techathon 6.0, collaborating with cross-functional teams to develop innovative technology solutions addressing real-world business challenges within time-constrained conditions
- Participated in the MSME Hackathon, engaging in rapid problem analysis, solution prototyping, and technical presentation under competitive time constraints
- Built and deployed multiple end-to-end projects, gaining hands-on experience in full-stack development with practical implementation across the software development lifecycle

PROJECTS

ChargeGenie AI – EV Charging Intelligence Platform

- Developed a unified platform to **aggregate multi-network EV charging stations** into a single interface.
- Implemented a **Smart Cost Optimization algorithm** to calculate total charging cost based on price, distance deviation, and waiting time.
- Designed a **Charger Reliability Index** using user feedback and historical uptime data.
- Built an **AI-based travel assistant** to recommend optimal charging stations and routes.
- Improved decision-making by providing **cost-efficient, reliable, and time-saving charging solutions**.

AI Web Agent for Automated Form Processing

- Developed an AI-based web agent to **automate online form filling processes** with high accuracy. Automated repetitive workflows, significantly **reducing processing time and improving accuracy**.
- Integrated **biometric verification and digital signature handling** for secure and authenticated submissions.
- Designed the system to operate in a **Linux environment**, enabling efficient automation of web workflows.
- Reduced manual effort and processing time by automating repetitive form submission tasks.
- Implemented intelligent logic to handle **dynamic web forms and validation checks**.

Academy Website (ANF ACADEMY)

- Designed and implemented a modern, responsive frontend interface for building an academy e-learning platform with intuitive navigation
- Created visually appealing course pages, interactive dashboards, and engaging UI elements to enhance learning engagement and user retention
- Optimized page layouts for mobile-first design, ensuring consistent user experience across all devices

Blind-Assist Shopping Agent (AI-based Accessibility System)

- Developed an AI-powered, voice-first shopping assistant for visually impaired users
- Enabled real-time product identification using mobile camera input
- Implemented label reading (ingredients, price, expiry) using OCR techniques
- Built allergen detection by matching product data with user health profiles
- Designed personalized recommendation system based on nutritional analysis
- Created a multi-agent architecture for detection, decision-making, and task execution
- Integrated voice interaction for hands-free and accessible user experience
- Implemented self-correcting workflows to handle detection errors and unclear inputs
- Maintained an audit trail of agent decisions for transparency and debugging
- Built using React.js, Spring Boot, MySQL, and AI/LLM integrations

Fitness Tracker Application

- Developed a Fitness Tracker application with end-to-end functionality, integrating frontend and backend components for seamless user experience.
- Implemented the backend using Spring Boot and MySQL, handling data storage, user authentication, and workout tracking functionalities.
